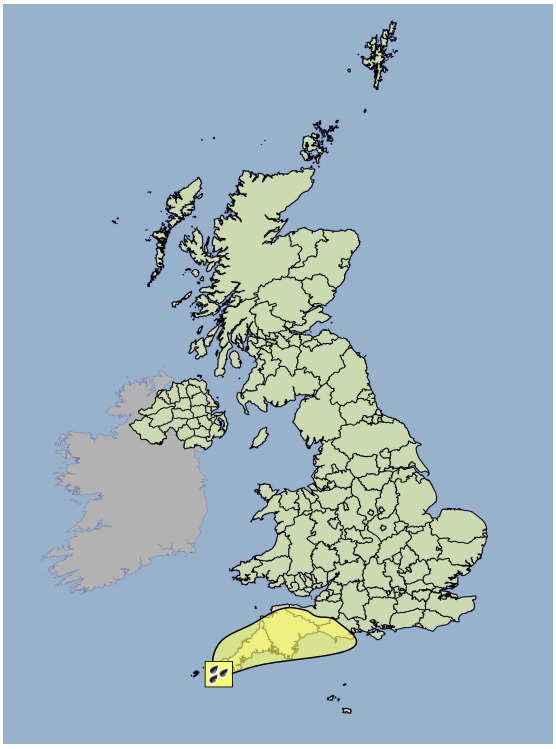
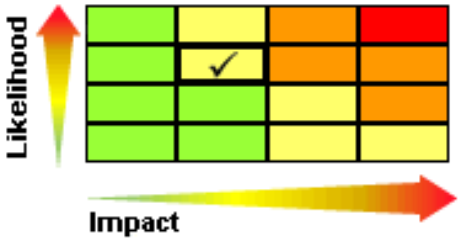
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system is giving another spell of wet and rather windy weather across southwest England today. Further rainfall totals of 10 to 15 mm are likely in places, with as much as 20-25 mm possible over high ground in the west of the area, particularly Dartmoor.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Mon, 17th Feb 2014** until **23:45 on Mon, 17th Feb 2014**

Further rain will continue to affect southwest England during the rest of today. This is not expected to be as prolonged or as heavy as the rain last week but given the saturated ground, the public should be aware that this still has the potential either to lead to localised flooding or to exacerbate existing issues. Rain should clear eastwards this evening followed by showers.

This is an update of the warning to give an idea of further likely rainfall amounts.
